

ExecutiveInsite™

MISSIONINSITE 

INTRODUCTION

Prepared for: Primera Iglesia Bautista de Hesperia
 Study area: 5 mile Radius
 Base State: CALIFORNIA
 Current Year Estimate: 2008
 5 Year Projection: 2013
 Date: 5/29/2009

This ExecutiveInsite Report has been prepared for Primera Iglesia Bautista de Hesperia. Its purpose is to "tell the demographic story" of the defined geographic study area. ExecutiveInsite integrates narrative analysis with data tables and graphs. Playing on the report name, it includes 12 "Insites" into the study area's story. It includes both demographic and beliefs and practices data.

ExecutiveInsite is intended to give an overview analysis of the defined geographic study area. A defined study area can be a school district, a zip code, a county or some custom defined geographic area such as a radius or a user defined polygon. The area

THE 12 INSITES	
INSITE	PAGE
Insite #1: Population, Household Trends	2
Insite #2: Racial/Ethnic Trends	3
Insite #3: Age Trends	4
Insite #4: School Aged Children Trends	6
Insite #5: Household Income Trends	7
Insite #6: Households and Children Trends	9
Insite #7: Marital Status Trends	10
Insite #8: Adult Educational Attainment	11
Insite #9: Employment and Occupations	12
Insite #10: Mosaic Household Types	13
Insite #11: Charitable Giving Practices	14
Insite #12: Religious Practices	15

Interpreting the Report

The ExecutiveInsite report is intentionally designed for easy reading. But there are a couple of tools provided in the tables that make this easier.

Change over time: Several trend tables will have a column on the far right that will indicate a change over time. Generally this begins with the last census and includes the current year estimate and five year projection. The output will be a percentage change up or down. This quickly indicates the direction overall the variable appears to be taking.

Color Coding: Both the "Change over Time" and "Comparative Indexes" columns are color coded to easily spot change and its direction.

Change:	Increasing	Stable	Declining
Index:	Above Ave	Ave	Below Ave.

Indexes: Some variables will have a column called "Comparative Index." An index is an easy way to compare a study area with a larger area. For this report, all comparisons are with the state or states within which the study area falls. This state (or states) is called the study area base. The indexes can be interpreted as follows.

Indexes of 100 mean the study area variable is the same as its base area.

Indexes greater than 100 mean the study area variable is above the base area. The higher the number, the greater it is above the base.

Indexes less than 100 mean the study area variable is below the base area. The lower the number, the greater it is below the base.

NOTE: Not all of the demographic variables available in the DI System are found in this report. The FullInsite Report will give a more comprehensive view of an area's demographics and ViewPoint a fuller view of its beliefs and practices.

INSITE #1: POPULATION AND HOUSEHOLD TRENDS

Population:

The estimated 2008 population within the study area is 99,147. The 2013 projection would see the area grow by 15,489 to a total population of 114,636. The population within the study area is growing somewhat faster than the statewide growth rate. While the study area is projected to grow by 15.6% in the next five years, the state is projected to grow by 5.5%. The study area's estimated average change rate is 3.1%.

Population Per Household

Population per Household: The relationship between population and households provides a hint about how the community is changing. When population grows faster than households, it suggests an increase in the persons per household. This can only happen when more persons are added either by birth or other process such as young adults in multiple roommate households or young adults returning to live with parents. In some communities this can occur when multiple families live in the same dwelling unit.

Households:

The households within the community are growing but not as fast as the population, thus the average population per household in 2000 was 3.09 but by 2013 it is projected to be 3.24. Compare this to the statewide average which for the current year is estimated at 3.0 persons per household.

Family Households:

Family households provide an additional hint about the changing dynamics of a community. If family household growth follows population growth, then it would be reasonable to assume that the increasing population per household comes from additional children. However, within the study area, this is not the case. Family households are not growing as fast as the population, suggesting the growth may be the result of growth of non-family adult households.

Population/Households & Family Trends	1990	2000	2008	2013
Population	57,621	70,982	99,147	114,636
Population Change		13,361	28,165	15,489
Percent Change		23.2%	39.7%	15.6%
Households	18,981	22,951	30,561	34,546
Households Change		3,970	7,610	3,985
Percent Change		20.9%	33.2%	13.0%
Population / Households	3.0	3.1	3.2	3.3
Population / Households Change		0.06	0.15	0.07
Percent Change		1.9%	4.9%	2.3%
Families	15,170	17,899	23,862	27,061
Families Change		2,729	5,963	3,199
Percent Change		18.0%	33.3%	13.4%

INSITE #2: RACIAL-ETHNIC TRENDS

The US population's racial-ethnic diversity is continually increasingly adding new and rich cultural mixes. These data consider the six groups for which trending information is available. Please note that several groups are aggregated into a single category due to their smaller size. Those persons who indicated Hispanic or Latino ethnicity along with a racial category have been separated into a Hispanic or Latino category.

The Population: Racial/Ethnic Trends table provides the actual numbers and percentage of the total population for each of the six racial/ethnic categories. Pay special attention to the final column on the right. This will quickly indicate the direction of change from the last census to the current five year projection.

The Racial Ethnic Trends graph displays history and projected change by each racial/ethnic group.

The percentage of the population...

Asian (Non-Hisp) is projected to remain about the same over the next five years.

Black/African American (Non-Hisp) is projected to remain about the same over the next five years.

This chart shows the percentage of each group for the current year estimate.

White (Non-Hisp) is projected to decline by -4.4% over the next five years.

Hispanic or Latino is projected to grow by 4.9% over the next five years.

Racial/Ethnic Trends	2000	2008	2013	2000 %	2008 %	2013 %	2000 to 2013 Change
Asian (NH)	853	1,753	2,315	1.2%	1.8%	2.0%	0.8%
Black/Afr Amer (NH)	2,967	4,117	4,635	4.2%	4.2%	4.0%	-0.1%
White (NH)	43,977	52,949	56,176	62.0%	53.4%	49.0%	-13.0%
Hispanic/Latino	20,715	38,880	50,548	29.2%	39.2%	44.1%	14.9%
Two Plus Races (NH)	1,703	1,114	726	2.4%	1.1%	0.6%	-1.8%
P Is/Am In/Oth (NH)	768	335	235	1.1%	0.3%	0.2%	-0.9%

INSITE #3: AGE TRENDS

A community's age structure and how it is changing is an important part of its story. Overall, the American Population has been aging as the Baby Boomers progress through each phase of life. This has been abetted by episodes of declining live births. However this picture may particularize differently from community to community. There are communities in the US where the average age is lower than some others. In other cases, there is a clear shift toward senior years as the Boomers enter their retirement years.

The Age Trend Insite explores two variables; Average age and Phase of Life.

Average Age Trends provides three important snapshots of a community from three date points; the last census, the current year estimate and the five year projection. These three numbers will indicate the aging direction of a community.

The Phase of Life Trends breaks the population into seven life phases that the population passes through in its life time.

AVERAGE AGE

	1990	2000	2008	2013
Study Area Average Age	32.3	33.9	32.9	34.1
Percent Change		5.0%	-3.0%	3.8%
CA Average Age	33.8	34.7	35.5	37.0
Percent Change		2.5%	2.4%	4.0%
Comparative Index	95	98	92	92

Summary of Average Age Findings:

The Average Age Trend chart shows both history and projection of the change in average age in the study area. The average age of the study area has been rising for several years. It is projected to rise over the next five years.

A comparison to the average age of the state helps to contextualize the significance of the average age of the study area and its history and projection. In the graph above, the study area and state are laid out side by side. The state's average age is estimated to be higher than the study area.

PHASE OF LIFE

The Phase of Life analysis provides insight into the age distribution of a population across the different stages of life experience. It can reveal a community in transition.

Pay special attention to the color codes of the Change column (far right below). It will immediately indicate which phases are increasing or decreasing as a percentage of the population.

Phase of Life	2000	2008	2013	2000%	2008%	2013%	2000 to 2013 Change
Before Formal Schooling							
Ages 0 to 4	5,580	7,135	7,876	7.9%	7.2%	6.9%	-1.0%
Required Formal Schooling							
Ages 5 to 17	20,784	24,510	25,747	29.3%	24.7%	22.5%	-6.8%
College/Career Starts							
Ages 18 to 24	3,207	7,032	8,184	4.5%	7.1%	7.1%	2.6%
Singles & Young Families							
Ages 25 to 34	8,250	13,532	15,722	11.6%	13.6%	13.7%	2.1%
Families & Empty Nesters							
Ages 35 to 54	19,705	26,989	31,059	27.8%	27.2%	27.1%	-0.7%
Enrichment Years Sing/Couples							
Ages 55 to 64	5,230	9,203	12,553	7.4%	9.3%	11.0%	3.6%
Retirement Opportunities							
Age 65 and over	8,226	10,745	13,495	11.6%	10.8%	11.8%	0.2%

Summary of Phase of Life Findings:

Phase of Life changes reflect the age profile of a community. It takes 2.1 children per woman to replace mother and father. If the percentage of the population under 20 is declining as a percentage of the total it is likely that the community will see an increase in the more senior aged population.

In this study area children 17 years of age and younger are declining as a percentage of the total population. Considering the other end of the phases of life, adults 55 years of age and older are increasing as a percentage of the total population.

In summary it may be that the community is aging as children are raised and leave but parents remain.

INSITE #4: SCHOOL AGED CHILDREN TRENDS

Children are the future! Understanding their specific population dynamics is critical for all planners of social and/or educational services. The “School Aged Children” variable is a subset of the “Required Formal Schooling” segment in the Phase of Life profile. It allows one to zoom in more closely on the children who are of formal schooling age.

The school aged population includes all school aged children including those enrolled in public and private schools, those home schooled and children in institutions

The School Aged Children variable provides a snapshot of three levels of the population that comprise school age children. The three levels roughly correspond to the following.

- Elementary grades
- Intermediate/Middle School grades
- High School Grades

School Aged Children	2000	2008	2013	2000%	2008%	2013%	2000 to 2013 Change
Early Elementary Ages 5 to 9	6,607	7,451	7,912	31.8%	30.4%	30.7%	-1.1%
Late Elementary-Middle School Ages 10 to 14	6,971	8,406	8,732	33.5%	34.3%	33.9%	0.4%
High School Ages 15 to 19	7,207	8,653	9,103	34.7%	35.3%	35.4%	0.7%

Summary of School Aged Children Findings:

Early Elementary children ages 5 to 9 are projected to increase as a percentage of children between 5 and 19 by 0.3%.

Late Elementary to Middle School aged children ages 10 to 14 are declining as a percentage of children between 5 and 19 by -0.4%.

High School aged children 15 to 19 are increasing as a percentage of children between 5 and 19 by 0.1%.

Overall, kids are aging through but there is some evidence of a resurgence of children in the younger years.

INSITE #5: HOUSEHOLD AND FAMILY INCOME TRENDS

AVERAGE HOUSEHOLD INCOME AND PER CAPITA INCOME

Average Household Income and Per Capita Income indicate the level of financial resources within a community. Average Household income reflects that average income for each household, whether family or non-family.

Per Capita Income is a measure of the average income by all persons within a household. For family households, this would include all children. It does not mean that each person actually draws the average income from work.

In this study area, the estimated current year average household income is \$64,690. The average household income is projected to grow by 14.9% to \$74,342.

The estimated per capita income for the current year is \$19,940. The Per Capita Income is projected to grow by 12.4%.

Household Income Trends	2000	2008	2013	2000%	2008%	2013%	2000 to 2013 Change
Less than \$10,000	1,845	1,775	1,716	8.0%	5.8%	5.0%	-3.1%
\$10,000 to \$14,999	1,827	1,352	1,309	8.0%	4.4%	3.8%	-4.2%
\$15,000 to \$24,999	3,339	3,616	3,468	14.5%	11.8%	10.0%	-4.5%
\$25,000 to \$34,999	3,115	3,646	3,756	13.6%	11.9%	10.9%	-2.7%
\$35,000 to \$49,999	4,174	4,915	5,077	18.2%	16.1%	14.7%	-3.5%
\$50,000 to \$74,999	5,238	6,619	7,426	22.8%	21.7%	21.5%	-1.3%
\$75,000 to \$99,999	1,893	4,444	5,439	8.2%	14.5%	15.7%	7.5%
\$100,000 to \$149,999	1,095	2,936	4,308	4.8%	9.6%	12.5%	7.7%
\$150,000 to \$199,999	161	709	1,218	0.7%	2.3%	3.5%	2.8%
\$200,000 or more	265	548	828	1.2%	1.8%	2.4%	1.2%

FAMILY INCOME

Family income is a sub-set of household income. It excludes non-family households. Family households include two or more persons who are related and living in the same dwelling unit. Children are more likely to live in family households. Non-family households are households in which two or more persons live in the same dwelling unit but are unrelated.

The number of families with annual incomes above \$100,000 is projected to grow over the next five years. For the current year, it is estimated that 16.2% of all family incomes exceed \$100,000 per year. In five years that number is projected to be 21.6%.

Family Household Income Trends	2000	2008	2013	2000%	2008%	2013%	2000 to 2013 Change
Less than \$10,000	970	997	1,072	5.4%	4.2%	4.0%	-1.5%
\$10,000 to \$14,999	955	605	506	5.3%	2.5%	1.9%	-3.5%
\$15,000 to \$24,999	2,344	2,440	2,344	13.1%	10.2%	8.7%	-4.4%
\$25,000 to \$34,999	2,435	2,753	2,739	13.6%	11.5%	10.1%	-3.5%
\$35,000 to \$49,999	3,360	3,769	3,763	18.8%	15.8%	13.9%	-4.9%
\$50,000 to \$74,999	4,647	5,485	6,038	26.0%	23.0%	22.3%	-3.7%
\$75,000 to \$99,999	1,774	3,952	4,764	9.9%	16.6%	17.6%	7.7%
\$100,000 to \$149,999	1,041	2,692	3,917	5.8%	11.3%	14.5%	8.7%
\$150,000-\$199,999	152	681	1,169	0.8%	2.9%	4.3%	3.5%
\$200,000 or more	220	488	751	1.2%	2.0%	2.8%	1.5%

ASSETS AND DEBT

Assets owned and debt held provide an indicator of a study area's financial strength. High assets and low debt suggests resources available.

The opposite is also true. Where high debt to asset ratios exist there are less likely to be potential financial resources for community activities.

Asset to Debt	2008%	CA 2013	Comp Index	Interpretation
Hhlds Owning Any Financial Assets	35.7%	35.7%	100	At the state average
Hhlds Owning Any Non-Financial Assets	35.2%	35.1%	100	At the state average
Hhlds With Any Debt	29.0%	29.2%	101	At the state average

INSITE #6: HOUSEHOLDS AND CHILDREN TRENDS

Diversity of child rearing environments is increasing along with the many other types of growing diversity in the US. To understand this, we begin with the types of households that exist in a community. There are...

- family households with children under 18
- family households without children under 18
- non-family households with children under 18
- non-family households without children under 18

The concern of this analysis is households with children under 18, whether a family household or a non-family household. Of the types of households with children there are...

- Married couple families
- Single parent families (father or mother)
- Non-family households

These three are reported for the study area in the table below.

Households with Children under 18	2000	2008	2013	2000%	2008%	2013%	2000 to 2013 Change
Married Couple	7406	9708	10859	68.2%	66.5%	65.6%	-2.7%
Single Parent	2332	3162	3616	21.5%	21.7%	21.8%	0.3%
Non-Family Hhold	996	1556	1912	9.2%	10.7%	11.5%	2.4%

Of the households with children under 18, married couple households are decreasing as a percentage while single parent households are increasing. The graph to the right illustrates this. Bars above the 0% point are indicate a family type that is increasing while bars below 0% are decreasing. This provides "insite" into how family households and structures with children are changing in the study area.

A comparison to the state reveals to what extent this community is similar or dissimilar to the state as a whole. The study area's married couple households with children are similar to the state's profile. The percentage of single parent households with children is about the same as the state.

INSITE #7: MARITAL STATUS TRENDS

MARITAL STATUS BY TYPE

Population by Marital Status considers the number and percentage of persons 15 years of age and greater by their current marital status. Both trend information as well as a comparison to the study area's state marital status types provides two different views of this social reality.

Marital types reported include..

- Never Married (Singles)
- Currently Married
- Divorced
- Separated
- Widowed

Population by Marital Status 15+	2000	2008	2013	2000%	2008%	2013%	2000 to 2013 Change
Never Married	12,378	17,608	20,610	23.9%	23.1%	22.9%	-1.0%
Married	28,304	42,216	50,178	54.6%	55.4%	55.7%	1.0%
Divorced	5,443	7,911	9,352	10.5%	10.4%	10.4%	-0.1%
Separated	2,207	3,251	3,852	4.3%	4.3%	4.3%	0.0%
Widowed	3,489	5,170	6,155	6.7%	6.8%	6.8%	0.1%

In this community, the current year estimate of marital status reveals a community of adults more likely to be married than the state average for adults. The percentage single never married is lower than the state average for adults 15 years and older. Divorce is more prevalent than the state wide average.

The graph to the right illustrates the comparison. Bars above the 0% point line indicate a marital status type that is increasing while bars below the 0% line are decreasing.

MARITAL STATUS BY FEMALE AND MALE

Who is more likely to be unmarried, women or men in this community? Consider these findings about this study area:

Women 15 years and older are about as likely to be divorced as men.

Women 15 years and older are less likely to be single, never married than men.

Women 15 years and older are more likely to be widowed than men.

INSITE #8: ADULT EDUCATIONAL ATTAINMENT

The level of educational attainment of a community's adult population is an important indicator of its opportunities and challenges. This analysis will look at the Adult Educational Attainment from two perspectives

First, it looks to see if the level of educational attainment for adults is rising or not. Second, it compares the level of attainment to that of the state of CALIFORNIA. (If this is a state report, the comparison will be to itself.)

EDUCATIONAL LEVEL ATTAINMENT CHANGE

The educational attainment level of adults has been rising over the past few years. It is projected to rise over the next five years by 2.0%.

EDUCATIONAL LEVEL COMPARED TO THE STATE

Population by Educational Attainment: 25+	2008%	CA 2008%	Comp Index
Less than 9th Grade	8.7%	10.4%	84
Some High School, No diploma	13.5%	8.6%	158
High School Graduate (or GED)	35.3%	24.1%	146
Some College, No degree	22.8%	19.4%	117
Associate Degree	7.8%	7.8%	100
Bachelor's Degree	8.4%	19.1%	44
Graduate or Professional school degree	3.4%	10.6%	32

The overall educational attainment of the adults in this community is lower than the state.

INSITE #9: POPULATION BY EMPLOYMENT

Like educational attainment, an analysis of a community by its employment types and categories provides an important “insite” into its socio-economics. This analysis looks at two factors.

First is a report of the employed population 16 and over by the traditional “blue collar” and “white collar” occupations and compares these to the state. Second, it looks at the community by the seven standard census bureau occupations and compares them to the state.

EMPLOYED POPULATION: BLUE COLLAR OR WHITE COLLAR

On the chart to the left, the study area is compared to the state of CALIFORNIA. This study area is well below the state average for White Collar workers. It is well above the state average for Blue Collar workers.

EMPLOYED CIVILIAN POPULATION BY OCCUPATION

Employed Civilian Pop 16+ by Occupation	2008%	CA 2008%	Comp. Index	Interpretation
Construction, Extraction, and Maintenance Occupations	18.9%	12.2%	155	Well above the state average.
Farming, fishing, and forestry occupations	0.3%	1.8%	17	Well below the state average.
Management, Business, and Financial Operations Occupations	7.9%	14.2%	56	Well below the state average.
Production, Transportation, and Material Moving Occupations	19.6%	13.0%	151	Well above the state average.
Professional and Related Occupations	14.3%	21.3%	67	Well below the state average.
Sales and related occupations	12.5%	11.4%	110	Well above the state average.
Service Occupations	26.4%	26.2%	101	At about the state average.

INSITE #10: MOSAIC HOUSEHOLD TYPES

Mosaic is a geo-demographic segmentation system developed by and for marketers. Instead of looking at individual demographic variables, a segmentation system clusters households into groups with multiple common characteristics. Demographic variables that generally cluster together would include income, educational levels, presence of children and occupations among others.

This database is developed by Experian. Some find the information helpful because it presents a multi-dimensional view of a community.

In the report below, the top 15 Mosaic Types of the study area are provided. (If less than 15, rows will be blank.)

NOTE: To obtain the Mosaic Type descriptions please download the document titled "MI Demographic Segments Guide: Quick Look" or "MI Demographic Segments Guide: Detail Look" from the Resource page of the MissionInsite website.

Mosaic Types	2008	2008%	State %	Comp Index	Relative to the CA State Ave.
C02 PRIME MIDDLE AMERICA	2,764	9.0%	0.2%	3967	Well above the state ave.
F03 SOUTHERN BLUES	406	1.3%	0.1%	1832	Well above the state ave.
F01 STEADFAST CONSERVATIVES	1,006	3.3%	0.5%	626	Well above the state ave.
B05 SECOND-GENERATION SUCCESS	14,072	46.0%	8.4%	549	Well above the state ave.
F04 URBAN GRIT	4,632	15.2%	4.3%	355	Well above the state ave.
E06 MATURE AMERICA	775	2.5%	0.8%	307	Well above the state ave.
K04 URBAN DIVERSITY	2,321	7.6%	2.8%	268	Well above the state ave.
B03 URBAN COMMUTER FAMILIES	349	1.1%	0.6%	187	Well above the state ave.
E05 AMERICAN GREAT OUTDOORS	1,976	6.5%	3.8%	171	Well above the state ave.
C03 SUBURBAN OPTIMISTS	1,100	3.6%	4.2%	86	Somewhat below the state ave.
H04 ASPIRING HISPANIA	834	2.7%	7.1%	38	Well below the state ave.
B01 STATUS-CONSCIOUS CONSUMERS	287	0.9%	3.0%	30	Well below the state ave.
I01 INDUSTRIOUS COUNTRY LIVING	18	0.1%	1.0%	10	Well below the state ave.
A03 WHITE-COLLAR SUBURBIA	8	0.0%	0.0%	1	Well below the state ave.
E02 URBAN BLUES	11	0.0%	0.0%	1	Well below the state ave.

INSITE #11: CHARITABLE GIVING PRACTICES

Charitable giving practices data provide three perspectives about giving in the study area. First, they indicate how extensive giving is within a study area by showing the percentage of households that are likely to contribute \$200 or more dollars per year to charitable causes.

Second, they project the direction of giving. Giving data is provided across 10 sectors of charity giving. Each community has its own distinctive pattern.

Finally, they show how the study area gives across the 10 sectors in comparison to the state of California. An area may contribute modestly to a charitable sector in terms of actual projected households but it may be well above the state-wide average for such giving.

Interpreting the Table

As the table is studied look at two factors; the number of people or households and the index. The first will provide a sense of the number strength in the study area. The second shows how giving to one of the 10 charitable targets compares to the state. Any "index" over 100 means the study area gives more to a charitable target than is true for the state as a whole.

To make the interpretation of this easier, the following table is sorted by Index. However, be sure to look at the "% of Households" column. A particular charitable sector may have a low index but still a larger percentage than some other of the 10 sectors represented here.

Charitable Contributions Last Yr: \$200 Or More	Hholds	% of HH	Index	Interpretation
Religious-\$200 Or More	8,059	26.4%	123	Somewhat above the state ave.
Social Services/Welfare-\$200 Or More	1,926	6.3%	99	About average for the state.
Other-\$200 Or More	1,320	4.3%	78	Somewhat below the state ave.
Health-\$200 Or More	888	2.9%	77	Somewhat below the state ave.
Private Foundation-\$200 Or More	797	2.6%	73	Somewhat below the state ave.
Education-\$200 Or More	812	2.7%	59	Well below the state ave.
Political Organization-\$200 Or More	288	0.9%	56	Well below the state ave.
Public Television-\$200 Or More	115	0.4%	45	Well below the state ave.
Public Radio-\$200 Or More	84	0.3%	30	Well below the state ave.
Environmental-\$200 Or More	74	0.2%	18	Well below the state ave.

Summary of Charitable Contribution Findings:

Overall, it is estimated that households in this study area are somewhat below the state average in their contributions to charities.

More specific findings include:

The number of charitable sectors where giving is well above the state average: 0.

The number of charitable sectors where giving is somewhat below the state average: 3.

The number of charitable sectors where giving is well below the state average: 5.

INSITE #12: RELIGIOUS PRACTICES

Religious practices differ greatly. For some people, the practice of religion is very important. For others less so. While the US continues to be a very religious country, the diversity of practice and beliefs continues to increase.

Summary of Religious Practices:

Though there are differences by each specific practice, taken together it is estimated that people in this study area are somewhat below the state average in religious practices.

Adult Religious Practices	Pop	% of Pop	Index	Interpretation
Conservative Evangelical Christian	26,093	36.8%	99	About average for the state.
Enjoy Watching Religious TV Programs	11,771	16.6%	92	Somewhat below the state ave.
Consider Myself A Spiritual Person	30,036	42.4%	88	Somewhat below the state ave.
Important to Attend Religious Services	13,413	18.9%	86	Somewhat below the state ave.
My Faith Is Really Important To Me	12,879	18.2%	84	Somewhat below the state ave.

Summary findings:

The number of religious practices well above the state average is 0.

The number of religious practices somewhat above the state average is 0.

The number of religious practices somewhat below the state average is 4.

The number of religious practices well below the state average is 0.
