Current Year: 2008  
5 Year Projection: 2013

**PEOPLE**

Population Trends	1990	2000	2008	2013
<b>Study Area Population</b>	57,621	70,982	99,147	114,636
Population Change		13,361	28,165	15,489
Percent Change		23.2%	39.7%	15.6%
Average Annual Change		2.3%	5.0%	3.1%
<b>State Population</b>	29,759,163	33,871,648	37,274,313	39,318,228
Population Change		4,112,485	3,402,665	2,043,915
Percent Change		13.8%	10.0%	5.5%
Average Annual Change		1.4%	1.3%	1.1%
<b>Study Area as a % of Total State Pop</b>	0.19%	0.21%	0.27%	0.29%

**Analysis:**

The population within the study area is projected to grow over the next five years.

**Definition Aids:**

**Percent Change:** A calculation between data years.

**Average Annual Change:** Annualizing the Percent Change by dividing the Percent Change by the number of years between data years.

**Story Helps:** Throughout this report, the user will notice certain cells colored 'red', 'yellow' or 'green.' These colors provide a significance hint. Red means declining, yellow is moderate and green represents an increase.

**Study Area as % of Total State Population:** The state population by data years is divided by the study area population by data years. Assists in creating proportion of study area to the state.

Population Trends: By Gender	2000		2008		2013		Proj. Change
Female	36,125	50.9%	50,172	50.6%	57,860	50.5%	-0.4%
Male	34,857	49.1%	48,975	49.4%	56,776	49.5%	0.4%
<b>Totals:</b>	<b>70,982</b>	<b>100.0%</b>	<b>99,147</b>	<b>100.0%</b>	<b>114,636</b>	<b>100.0%</b>	

CA	2008	Comp Index
18,622,776	50.0%	101
18,651,537	50.0%	99
37,274,313	100.0%	100

**Definition Aids:**

**1. Projected Change: What does projected change mean?** Projected Change subtracts the most recent percentage to the most historical number. In this case, the 2000 Census figure is being subtracted from the Five Year Projection. In some cases, there will not be three data points, only two. then the difference is calculated between the two.

**2. Comparative Index: What is a Comparative Index?** This index allows the user to compare the study area to a base area. The base area used is the primary state in which the study has been done. Interpretation is simple. Assume the base area is the "average." If the index is less than 100, then the particular variable of the study area is below the base area—or below average. If the index is over 100 then the study area variable is above the state average. The lower the number the further the distance from the base. The higher the number, the greater the distance from the state.

**People by Age**

Average/Median Age	1990	2000	2008	2013
<b>Average Age</b>	32.3	33.9	32.9	34.1
Average Age Change		1.6	-1.0	1.2
Percent Change		5.0%	-3.0%	3.8%
<b>Median Age</b>		31	32	34
<b>State Average Age</b>	33.8	34.7	35.5	37.0
Average Age Change		0.8	0.8	1.4
Percent Change		2.5%	2.4%	4.0%
<b>Average Age Comparative Index</b>	95	98	92	92

**Analysis:**

The average age of the study area is projected to get somewhat older.  
The average age of the study area is somewhat below the state average.

**Analysis:**

Children aged 0 to 4 are projected to decline as a percentage of the total population over the next five years.  
School children aged 5 to 19 are projected to decline as a percentage of the total population over the next five years.  
Adults over 55 are projected to increase as a percentage of the total population over the next five years, indicating an aging community.

**Definition Aids:**

**How do I read the graph above?** This graph tells an interesting story about the study area. It shows the percentage of the total population falling in each of these **census age categories** by the 2000 census, the current year estimate and the five year projection. It will show how a particular age range changes as a percentage of the total population. Often one can see the aging of a study area. Younger age categories may be less with each data point beyond the 2000 census. Older categories may increase as a percentage over time.

**Definition Aids:**

**How do I read the graph above?** This graph illustrates when a particular census age category is projected to increase or decrease between the 2000 census and the five year projection. Bars that rise above the mid-point are increasing as a percentage. Those dropping below are decreasing as a percentage. This graph works well with the one above it to tell the story of how the study area is aging.

## REPORT NOTES AND INTERPRETATION AIDS

### Variable Definitions

Full variable definitions can be found in the "Demographic Reference Guide" found under the 'Resources' tab on the MissionInsite page. Go to <http://www.missioninsite.com/resources.shtml>.

### The Story in the Numbers

Why study demographic numbers? Because there is a story in them. These numbers reflect particular characteristics of the area targeted for study. Using the MI System, a user can define virtually any area to study. Once that selection is made and the reports generated, the task is to find the story that is behind the numbers. For example, is the average age increasing? And are the older phases of life increasing as a percentage of the population while the younger phases are decreasing? This presents a story. The study area is aging. Why? Can a reason be discovered in other information? This is what is meant by finding the story in the numbers.

### Story Helps: Built into this report are several elements that assist in finding the story in the numbers.

**State Figures:** Each report includes some actual numbers and percentages for the state within which most of the study area is located. It is like getting two reports in one. By providing the state numbers, the user is able to discern additional patterns in the data. These patterns are also highlighted using comparative indices and color coding (see below).

**Comparative Index:** What is a Comparative Index? This index allows the user to compare the study area to a base area. The base area used is the primary state in which the study has been done. Interpretation is simple. Assume the base area is the "average." If the index is less than 100, then the particular variable of the study area is below the base area—or below average. If the index is over 100 then the study area variable is above the state average. The lower the number the further the distance from the base. The higher the number, the greater the distance from the state.

**Projected Change:** Projected Change subtracts the most recent percentage to the most historical number. In many cases, the 2000 Census figure is being subtracted from the Five Year Projection. In some cases, there will not be three data points, only two. Then the difference is calculated between the two.

**Color Coded Cells:** Throughout this report, the user will notice certain cells colored 'red', 'yellow' or 'green.' These colors provide a significance hint about the story of the study area. Generally, the colors either mean increase or decline or above or below average. Often times, an increase in one sub-variable will have a corresponding increase in a different one. For example, a community may see younger life phases decreasing while older ones are increasing. Hints that this is occurring will be found in scanning the colors. More specific information on what the codes mean follow.

\* **Projected Change Color Codes:** Red means declining, yellow is moderate and green represents an increase.

\* **Comparative Index Color Codes:** If the column is "Comp Index" then green means above average, red below average and yellow, average.

**Ratio Single Detached to Single Unit Attached:** This ratio provides insight into the kind of neighborhoods in the study area. Traditional neighborhoods will have a higher ratio.
